Microcosmic Urbanism: small scale urban design

Architecture exists at various scales simultaneously: from urban design to detail design. A microcosmos is a miniature representation of something; it may be a part relative to a whole. It seems no coincidence that within the Universe the structure of the Milky Way Galaxy appears similar to the structure of our Solar System that appears very similar to the structure of it's planets with their moons that appears very similar to the structure of their smallest building block: the atom.

This talk will examine the idea of microcosmos as a strategy for conceptualizing and developing architecture and urbanism at various scales simultaneously.
